PROTECTIVE[®] STRATEGIC OBJECTIVES II VUL

Variable Universal Life Insurance

Not FDIC/NCUA Insured	Not Bank or Credit Union Guaranteed	Not a Deposit
Not Insured By Any Federal Government Agency		May Lose Value

Protective refers to Protective Life Insurance Company.

Customize your investment strategy

Investing your premiums is an important challenge in customizing your Protective® Strategic Objectives II VUL policy. You want to provide financial security for you and your loved ones and need plenty of choices to map out a sound strategy.

Protective gives you the flexibility to choose from a variety of quality investment options managed by top fund managers, with both turnkey and do-it-yourself options for creating a diversified portfolio. You and your financial advisor can customize an investment strategy that's consistent with your overall protection and financial plan.

Strategic investing

As with any market instrument, values fluctuate and are subject to market risk. But there are strategies to help manage risk and ultimately address your financial needs.

Diversification

The amount of risk you assume and how you allocate your premium among the Protective strategic objectives II VUL insurance investment options will influence the returns you realize. Diversification, or choosing a wide variety of investments, can help manage your risk by minimizing the effect of any single investment. The returns of under performing investments can be mitigated by the market gains of other, higher performing investments. While diversification can help reduce your overall risk, it does not protect against the possibility of losses, especially in a falling market.

With Protective strategic objectives II VUL, you can diversify among investment options from top fund managers selected for professional credentials and experience. These managers implement the strategy for their respective funds and manage trading in their portfolios.

Tax-free transfers among investment options can help you maintain your preferred level of diversification, as your investments experience varying rates of return. Certain limitations apply, so please see the product prospectus for more information.

Portfolio rebalancing

Your original asset allocation will change over time due to market fluctuations and varying investment performance. Periodically, you may find that you are overinvested in certain assets and want to restore your target asset allocation. Known as portfolio rebalancing, this will help you maintain a level risk profile. Portfolio rebalancing transfers are not typically taxable with Protective Strategic Objectives II VUL insurance policies and are available quarterly, semi-annually or annually for the variable universal life insurance investment options only.

Dollar-cost averaging

Rather than investing all at once, you may decide to ease your money into the market by investing fixed amounts at regular intervals, or dollar-cost averaging. This approach enables you to take advantage of the market's natural fluctuations by enabling you to buy more units when prices are low and fewer units when prices are high. You may end up paying less than the investments' average price over time.

The table below illustrates how dollar-cost averaging works. Let's assume you invest \$1,000 per month into the same investment for six months. The unit price of that investment fluctuates throughout the period. In this example, the average unit price was \$9.83, but the average unit cost to you was just \$8.73 because you continued to invest systematically, regardless of pricing fluctuations.

	Invested	Unit price	Units purchased
January	\$1,000	\$10	100
February	\$1,000	\$8	125
March	\$1,000	\$5	200
April	\$1,000	\$10	100
May	\$1,000	\$16	62.5
June	\$1,000	\$10	100
Total	\$6,000		687.5

	Results	
Average unit price	\$9.83	(\$59 6 months)
Average unit cost	\$8.73	(\$6,000 invested 687.5 units purchased)
Current price	\$10.00	
Current value of investment	\$6,875	(687.5 units purchased x \$10 unit price)

This chart is illustrative only and is not intended to forecast, imply, or guarantee the future performance of any investment. It does not include the effects of any fees or expenses, which would negatively affect the results shown.

Protective allows you to automatically transfer a specified dollar amount on a monthly or quarterly basis (minimum \$100 monthly or \$300 quarterly) to or from any of the Protective Strategic Objectives II VUL investment options. Dollar-cost averaging is available for periods of six to 48 months. To begin dollar-cost averaging, a minimum of \$5,000 is required in the source investment option. A Dollar-Cost Averaging (DCA) Fixed Account is also available for automatic monthly or quarterly transfers of premium payments into the investment options over a maximum period of 12 months. The DCA fixed account is available for the initial premium payment only.

Please be aware dollar-cost averaging involves continuous investments in securities despite fluctuating market conditions. You should carefully consider your financial ability to invest through periods of low prices. There can be no assurance that dollar-cost averaging will reduce your investment cost, result in a profit or protect you against losses in declining markets. Please see the product prospectus for details.

Investment options

Protective gives you access to investment options in a variety of asset classes. We emphasize quality, and many options have a long track record of performance. We encourage you to carefully review these investment options and their respective objectives, to ensure that the level of risk exposure is appropriate for you.

The investment objectives and policies of the underlying investment options may contain different investments than similarly named mutual funds offered by the investment managers. Investment results will differ and may be higher or lower than the investment results of such other funds. An investment in any of the variable universal life investment options is subject to market risk and loss of principal.

Please refer to the underlying fund prospectus for more information regarding risks associated with the portfolios available within your variable universal life.

Portfolios that invest in high-yield securities are subject to greater credit risk and price fluctuation than portfolios that include higher quality securities. Stocks of small or mid cap companies have less liquidity than those of larger, established companies and are subject to greater price volatility and risk than the overall stock market. REITs involve risks such as refinancing, economic conditions in the real estate industry, changes in property values, dependence on real estate management, and other risks associated with a portfolio that concentrates in one sector or geographic region. Emerging market stocks and foreign portfolios involve risks and opportunities not associated with investing domestically, such as currency fluctuation, political risk and differences in financial reporting. Money Market and U.S. Government Securities portfolios are not insured or guaranteed by the Federal Deposit Insurance Corporation, U.S. government or any other governmental agency. Bonds, if held to maturity, provide a fixed rate of return and a fixed principal value. Bond funds fluctuate and shares, when redeemed, may be worth more or less than their original cost.

Sector Funds	
Investment Option	Objective
Vanguard VIF Real Estate Index Portfolio	A high level of income and moderate long-term capital appreciation by tracking the performance of a benchmark index that measures the performance of publicly-traded equity REITs and other real estate-related investments.

*You could lose money by investing in a money market fund. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so.

Your choice made simple

With so many investment choices, it's easy to become overwhelmed. So Protective offers four model portfolios to simplify the asset allocation process. Each one includes broad diversification by asset class and fund manager and offers a turnkey solution for investors whose tolerance for risk varies.

Take a look at the model portfolios.
