Not Insured By Any Federal Government Agency		May Lose Value

Protective refers to Protective Life Insurance Company.

Customize your investment strategy

Investing your premiums is an important challenge in customizing your Protective® Investors Benefit Advisory VUL policy. To achieve financial security for you and your loved ones, you need a competitive fund line up to create a solid investment strategy.

Protective gives you the flexibility to choose from a variety of quality investment options managed by established fund managers, with both turnkey and do-it-yourself options for creating a diversified portfolio. Your financial professional can help to customize an investment strategy that will play an important role in your overall financial plan, today and tomorrow.

Strategic investing

As with any market instrument, investment values fluctuate and are subject to market risk. But there are strategies to help manage risk and help meet your financial needs.

Diversification

The amount of risk you assume and how you allocate your premium among the Protective Investors Benefit Advisory VUL investment options will influence the returns you realize. Diversification, or choosing a wide variety of investments, can help manage your risk by helping to minimize the effect of any single investment's performance on your overall allocation. The returns of underperforming investments can be mitigated by the market gains of other, higher performing investments. While diversification can help reduce your overall risk, it does not protect against the possibility of losses, especially in a falling market.

With Protective Investors Benefit Advisory VUL, you can diversify among investment options from established fund managers selected for professional credentials and experience. These managers implement the strategy for their respective funds and manage trading in their portfolios.

INVESTMENTS

Tax-free transfers among investment options can help you maintain your preferred level of diversification. Certain limitations apply, so please see the product prospectus for more information.

Portfolio rebalancing

Your original asset allocation will change over time due to market fluctuations and varying investment performance. Periodically, you may find that you are overinvested in certain assets and want to restore your target asset allocation. Known as portfolio rebalancing, this will help you maintain a level risk profile. Portfolio rebalancing transfers are not typically taxable with Protective Investors Benefit Advisory VUL insurance policies and are available quarterly, semi-annually or annually for the variable universal life insurance investment options only.

Dollar-cost averaging

Rather than investing all at once, you may decide to ease your money into the market by investing fixed amounts at regular intervals, or dollar-cost averaging. This approach enables you to take advantage of the market's natural fluctuations by enabling you to buy more units when prices are low and fewer units when prices are high. You may end up paying less than the investment option's average price over time.

The table below illustrates how dollar-cost averaging works. Let's assume you invest \$1,000 per month into the same investment for six months. The unit price of that investment fluctuates throughout the period. In this example, the average unit price was \$9.83, but the average unit cost to you was just \$8.73 because you continued to invest systematically, regardless of pricing fluctuations.

	Invested	Unit price	Units purchased
January	\$1,000	\$10	100
February	\$1,000	\$8	125
March	\$1,000	\$5	200
April	\$1,000	\$10	100
May	\$1,000	\$16	62.5
June	\$1,000	\$10	100
Total	\$6,000		687.5

	Results	
Average unit price	\$9.83	(\$59 ÷ 6 months)
Average unit cost	\$8.73	(\$6,000 invested ÷ 687.5 units purchased)
Current price	\$10.00	
Current value of investment	\$6,875	(687.5 units purchased x \$10 unit price)

This chart is illustrative only and is not intended to forecast, imply, or guarantee the future performance of any investment. It does not include the effects of any fees or expenses, which would negatively affect the results shown.

Protective allows you to automatically transfer a specified dollar amount on a monthly or quarterly basis (minimum \$100 monthly or \$300 quarterly) to or from any of the Protective Investors Benefit Advisory VUL investment options. Dollar-cost averaging is available for periods of six to 48 months. To begin dollar-cost averaging, a minimum of \$5,000 is required in the source investment option. A Dollar-Cost Averaging (DCA) fixed account is also available for automatic monthly or quarterly transfers of premium payments into the investment options over a maximum period of 12 months. The DCA fixed account is available for the initial premium payment only.

Please be aware dollar-cost averaging involves continuous investments in securities despite fluctuating market conditions. You should carefully consider your financial ability to invest through periods of low prices. There can be no assurance that dollar-cost averaging will reduce your investment cost, result in a profit or protect you against losses in declining markets. Please see the product prospectus for details.

Investment options

Protective gives you access to investment options in a variety of asset classes. We emphasize quality, and many options have a long track record of performance. We encourage you to carefully review these investment options and their respective objectives, to ensure that the level of risk exposure is appropriate for you.

The investment objectives and policies of the underlying investment options may contain different investments than similarly named mutual funds offered by the investment managers. Investment results will differ and may be higher or lower than the investment results of such other funds. An investment in any of the variable universal life investment options is subject to market risk and loss of principal.

Please refer to the underlying fund prospectus for more information regarding risks associated with the portfolios available within your variable universal life.

Portfolios that invest in high-yield securities are subject to greater credit risk and price fluctuation than portfolios that include higher quality securities. Stocks of small or mid cap companies have less liquidity than those of larger, established companies and are subject to greater price volatility and risk than the overall stock market. REITs involve risks such as refinancing, economic conditions in the real estate industry, changes in property values, dependence on real estate management, and other risks associated with a portfolio that concentrates in one sector or geographic region. Emerging market stocks and foreign portfolios involve risks and opportunities not associated with investing domestically, such as currency fluctuation, political risk and differences in financial reporting. Money Market and U.S. Government Securities portfolios are not insured or guaranteed by the Federal Deposit Insurance Corporation, U.S. government or any other governmental agency. Bonds, if held to maturity, provide a fixed rate of return and a fixed principal value. Bond funds fluctuate and shares, when redeemed, may be worth more or less than their original cost.

Your choice made simple

With so many investment choices, it's easy to become overwhelmed. So we offer four model portfolios to simplify the asset allocation process. Each one includes broad diversification by asset class and fund manager and offers a turnkey solution for investors whose tolerance for risk varies.

Take a look at the model portfolios below.

Target allocation		Conservative Growth	Moderate Growth	Growth & Income	Aggressive Growth
		Equity	50%	65%	75%
	Bond	50%	35%	25%	10%
American Funds IS® Global Growth 1		5%	5%	10%	10%
American Funds IS® New World Fund 1		5%	10%	10%	10%
BlackRock Global Allocation V.I. I				10%	10%
ClearBridge Variable Mid Cap I		5%	5%	5%	
ClearBridge Variable Small Cap Growth I				5%	15%
